Sharpen Your Observation Skills

Don’t be the one who says “let’s wait and see,” when you have the chance to help a family act early.

Did you know that autism can be diagnosed by 18-24 months? And yet, the median age of diagnosis in the US is 4-5 years.

**Autism Navigator for Primary Care** offers a rare collection of video clips so you can learn what autism looks like before it is usually diagnosed.
