Why is early detection of autism so important? So that early intervention can begin as soon as possible.

What you do and say helps shape a baby’s brain, especially during this critical time when their brain is growing faster than it ever will again.

Learn About our Courses

About Autism in Toddlers — Free for everyone. See what autism looks like in 8 toddlers at 18-24 months. Then see the dramatic difference in these toddlers and their families over 2-3 years of effective early intervention.

Autism Navigator for Early Intervention Providers — Our 30-hour course for providers to learn how to coach families to use evidence-based intervention strategies in everyday activities and to address challenging behaviors.
